

The Highest Earthquakes of the Day November 25, 2015 – January 31, 2016

Patrick Geryl (patrick.geryl (add) skynet.be) January 31, 2015

Abstract: We found strong evidence for earthquakes induced by planetary alignments. Therefore we researched the Planet and Planetoid Moon – Earth - Axis alignments from the 8 planets, Pluto and the planetoids Vesta, Ceres, Juno, Pallas and Chiron. 4 algorithms have been found to calculate if 6.0 plus earthquake activity is possible. First you need a geocentric connection with a planet or planetoid with the Sun. Secondly, if the same planet or planetoid has a Heliocentric connection with another planet or planetoid, a 6.5 plus quake can be triggered. Thirdly you need 3 planets (or a combination planet – planetoids) with the Moon – Earth axis, which also come back in a Triple alignment. A fourth algorithm gives the time frame in which the quake can happen. The strength from the quake depends from the strength of the alignments.

Strong Evidence for Earthquakes Induced by Heliocentric and Planetary Alignments

NASA Relevance

In 2008 NASA sent this headline into the world, “Magnetic Portals Connect to the Sun.” If we assume that the same principle can be applied for all the planets and also for five planetoids, then we find a surprising connection between planetary alignments and earthquakes. In short; Planetary alignments create certain magnetic inductions that are amplified by the magnetic field of the Sun and the Earth. With this principle we can calculate how and when earthquakes will be induced.

Highlights from the 2008 (October 30th) NASA article :

“During the time it takes you to read this article, something will happen high overhead that until recently many scientists didn’t believe in. A magnetic portal will open, linking Earth to the sun 93 million miles away. Tons of high-energy particles may flow through the opening before it closes again, around the time you reach the end of the page. Researchers have long known that the Earth and sun must be connected. Earth’s magnetosphere (the magnetic bubble that surrounds our planet) is filled with particles from the sun that arrive via the solar wind and penetrate the planet’s magnetic defenses. They enter by following magnetic field lines that can be traced from terra firma all the way back to the sun’s atmosphere.“

Heliocentric - Planetary Alignment Theory

- The Sun sends charged particles within the solar wind, this ‘loads’ the planets ‘up’. We include Pluto as a planet because the calculations show a huge effect from Pluto on the Sun and the Earth.
- The moon has no magnetic field, but has a big difference in polarity between the side that is looking to the Sun and the side looking away from the Sun.
- When planets align...they send a kind of radio signal, probably a GSM-like signal.
- This radio signal is taken up by the magnetic field of the Sun and then made stronger, just like a GSM signal is made stronger when it reaches your apparatus.
- The portals that connect the Earth with the Sun are overwhelming proof of this principle.
- But also the magnetic field of the Earth reacts to these signals: When a signal reaches the Earth, her magnetic field empowers the signal: nearly instant earthquake.

Definition Alignments With the Planets & Planetoids:

- Two planets (or a planet – planetoid combination) that Heliocentrically align on the same side of the Sun: Conjunction and the Sun.
- Two planets (or a planet – planetoid combination) that Heliocentrically align on the opposite sides of the Sun: Opposition across the Sun.
- Triple Line Up: Any two planets, planetoids, or combinations, which Line Up. Remark: There can be quite a bit of difference in one day within these Triple Line Ups, due to fast Mercury that moves around 4 degrees a day, and Venus around 1.6 degrees a day.
- The Triple Line Up can be anywhere across the solar system – e.g. does not have to “go through” the Earth or the Sun. But they have to be in a straight line – Lined Up.
- The to be used ‘difference in degrees’ has to be estimated by a large scale program. With these differences we have a reasonable good result:
 - Opposition across the Sun: 3.5 degrees to each side from the midpoint.
 - Conjunction and the Sun: 3.5 degrees to each side from the midpoint.
 - Triple Line Up: 3.5 degrees to each side from the midpoint.

Figure 1: Here you see a combination from a Conjunction and the Sun, 2 Oppositions across the Sun and a 3 planet resonance (Triple Line Up). On the right Earth and Mars are in a Heliocentric Conjunction . Venus (on the left) is in a Heliocentric Opposition with the Earth and Mars at the same time.

Why the Planetoids?

Example 1: Pallas

Pallas is in a near -1:1 mean-motion orbital resonance with Ceres. Pallas also has a near-18:7 resonance (6500-year period) and an approximate 5:2 resonance (83-year period) with Jupiter.

Courtesy: Wikipedia

Figure 2: Depiction of asteroid Pallas 18:7 near resonance with Jupiter in a rotating frame . Jupiter (pink loop at upper left) is held nearly stationary. The shift in Pallas' orbital alignment relative to Jupiter increases steadily over time; it never reverses course (i.e., there is no libration).

Example 2: Chiron

Chiron is a body in transition, due to phase locking with both Saturn and Uranus. Its orbital period is a close match to the 7:12 resonance with Saturn and the 5:3 resonance with Uranus. It is engaged in a slow, but chaotic exchange of angular momentum involving Saturn and Uranus over a 50.42 year cycle at present. Chiron spends some of this cycle inside the orbit of Saturn, much as Pluto-Charon do inside Neptune's orbit at perihelion. In addition, Chiron accomplishes two orbital crossings of Saturn's orbit in each complete orbit. At aphelion, it approaches very close to the orbit of Uranus. This 50.42 year period of Chiron is not an exact discrete relation to either planetary resonance, but it is close enough, and the orbit is eccentric enough to allow for radical change caused by either a too close approach to Uranus or Saturn (Chiron and Other Transitional Solar System Bodies By Willian J. Priest).

Geocentric and Heliocentric Alignments and the Highest Earthquakes of the Day

Alignments With the Moon – Earth - Axis:

- A planet that aligns with the Moon on the same side of the Earth: Conjunction.
- A planet that aligns with the Moon on the opposite side of the Earth: Opposition.
- Other important alignments with the Moon - Earth axis: Trines, Sextiles, Squares.
- The to be used ‘difference in degrees’ has to be estimated by a large scale program. With these differences we have a reasonable good result:
 - Opposition across the Moon – Earth axis: 3.5 degrees to each side from the midpoint.
 - Conjunction and the Moon – Earth axis: 3.5 degrees to each side from the midpoint.

Alignments Needed for Higher Activity

- **A planet or planetoid which has a Geocentric alignment with the Sun.**

The most influential alignments are:

- Squares.
- Trines.
- Sextiles.

- **To induce 6.5 plus activity you also need a Heliocentric connection:**

The most influential alignments are:

- Squares.
- Trines.
- Sextiles.

- **3 planets (or a planet(s) – planetoid(s) combination) active at the same time with the Moon – Earth axis, and a corresponding Triple with the same code.** Quake activity depends from the strength of the Triple Line Up. Triples with Venus or Mercury lead to higher quake activity.

This can be considered one of the strongest Triples possible:

- Triple Line Up Mercury – Venus – Neptune

This can be considered one of the weakest Triples possible:

- Triple Line Up Juno – Ceres – Pallas

Introduction:

The most important finding from this theory is that you need a Geocentric connection with the Sun to induce higher activity or a 6.0 quake. This means we have a chance for 6.0 or 6.0 plus activity on November 27, 2015

January 10 (01:00) – 12 (04:00), 2016: Conjunction Juno – Venus and the Sun

Reason earthquake:

The Geocentric Sun alignments and the Heliocentric Earth alignments stimulate the Conjunction Juno – Venus and the Sun. On top of that the Triple Juno – Venus – Uranus is several times stimulated via the Heliocentric alignments. The Moon – Earth alignments activate the Triple Vesta – Uranus – Mars.
The Geocentric Trine Jupiter – Pallas ends around the time of the quake!

January 10 (01:00) – 12 (04:00), 2016: Conjunction Juno – Venus and the Sun

Reason earthquake:

The Opposition Uranus – Venus ended hours earlier. This sended energy to Uranus and Venus. Chiron is Heliocentrically aligned with the Triple Juno – Venus – Uranus. Juno, Venus and Uranus have a strong Square with the Earth and Chiron a Trine with the Earth.

Saturn is in a Geocentric Novile Saturn – Sun and a Geocentric Semisquare Saturn – Pallas – Mercury. This stimulates the Triple Earth – Mercury – Pallas that started an hour before.

The Heliocentric – Earth alignments activate this Conjunction / Opposition:

Reason earthquake:

Full moon is on January 24. So the earthquake intensity will increase.

The Opposition Earth - Pallas across the Sun ended a few hours before. This sended energy to Pallas and the Earth and activates the Triple Juno – Pallas – Neptune and the Triple Line Up Juno – Mars – Earth (early on). The Triple Line Up Vesta - Pluto – Ceres is also ending and sends energy to Pluto and Vesta. Pluto is in the Triple Line Up Pluto – Mercury – Earth .

The Moon – Earth alignments activate Vesta and Saturn. They have strong Geocentric alignments:
