Newton did not DISCOVER Second Law of Motion, $F = ma$

PLEASE do not teach wrong science to school students.

Swiss scientist Leonhard Euler discovered $F = ma$, which is called Newton's Second Law of Motion.

It is residual effect of COLONIZATION

more information at link

.....Part I

Proof

See, website of Mathematical Association of America (MAA), Washington, USA

www.eulerarchive.maa.org/

Section Euler's archive Paper E479 page 223 Equation $F=ma$ is clearly given.

Year in which $F=ma$ is published, 1775 i.e. 48 years death of Newton

.....Part II

What did Newton give in the Principia (1686, 1713, 1726)?

Newton gave three laws of motion at page 19-20

Acceleration (a) was not discovered in Newton's time , so not to speak of

$F=ma$

Link for Newton's Principia

https://books.google.co.in/books?id=Tm0FAAAAQAAJ&pg=PA1&redir_esc=y&hl=en#v=onepage&q&f=false

Newton's second law of motion as in the Principia

Force = change in velocity

$F = dv$

It is never discussed, taught or written in science as it is UNWANTED CHILD.

Newton's $F=dv$ is replaced by Euler's $F=ma$?

It is the biggest superstition on the Earth.

What scientists are gaining DEPRIVING Euler from credit of second law of motion.

Many aspects of Newton's work are extended in the books (published from Cambridge, London)

1. Beyond Newton and Archimedes (2013, pp 335)

2. Beyond Einstein and $E=mc^2$ (2015, pp.546)

The books are under evaluation by 'The National Academy of Science India', under instruction of Hon'ble Minister of Science and Technology Dr Harsh Vardhan.
