

Experimental verification of Theoretical Physics

Carel van der Togt

paradox-paradigm@vandertogt.com

In the past 12 years I have been trying in various ways to convince Science to take into consideration that historical mistakes have been made in Theoretical Physics and that for the benefit of Science, environment and economic development, these mistakes should be acknowledged.

Science ignores any argument not consistent with prevailing theories without justification (for more information read Incompetent Science). Theoretical Physics is the only Science where the “unskillful” are considered not competent to understand the fundamentals. Much too complicated for ordinary people to comprehend; only the geniuses of Theoretical Physics can understand!

Theoretical physicists indeed make things too mathematical, too mysterious, too fantastic, too complicated, too However that was not the situation before Relativity Theory (RT) and Quantum Mechanics (QM) came to power. At the beginning of the 20th century Physics was understandable and logical and not mysterious and inconsistent!

Obviously it is impossible for theoretical physicists to admit RT and QM are invalid theories. How can they correct the physics they created and passionately believe in? How can they retract their claims that space and time are relative, parallel worlds and wormholes exist, that subatomic physics is not intuitive, ; that is impossible because if they do their status of “most genius” will change immediately to “crackpot” and that is unbearable.

Theoretical Physics refuses to perform a simple fundamental experiment that will test **assumed fundamental premises** at the core of all the preposterous theories. Even Nobel laureate Prof. 't Hooft cannot come up with a single legitimate argument against the discussed article and experiment!

No one dares to hold Science responsible and demand that the assumed fundamentals on which their extraordinary claims are based are properly verified by means of the Scientific Method.

However the ordinary “unskillful” people who pay the bill for the billions on Science can make the difference. When you agree Science should be held responsible and should perform the simple test to verify their fantastic claims I invite you to forward this email to The New York Times executiveeditor@nytimes.com and The Guardian Alan.Rusbridger@guardian.co.uk

This email is sent mainly to (theoretical) physicists and to a lesser degree to the “unskillful”. When you know friends and/or colleagues who also agree please forward the email to them so a momentum can be achieved which the quality newspapers cannot ignore.
